Abstract (en)
[origin: EP0275913A2] An electrical switching device, which is particularly suitable for spray and injection pistols, has a switching element (10), a release element (11) on an operating device (4) and an additional operating element (19) to make the switching function effective. The switching element (10) is supported by a slide (13) which can be moved against the force of a spring (16) and back. The operating element (19) can be adjusted at right angles to the slide path and has a control cam (21) on which rests a driver (17), connected to the slide (13), under the influence of the spring (16). This arrangement permits simple switching of the operating element (19), even when the operating device (4) is operated. <IMAGE>
