Abstract (en)  
[origin: US4846230A] A ribbon comprises weft threads (11) and warp threads (13) arranged respectively along the width and the length thereof and presenting in a narrow part (10) of its width at least one zone designed to be secured to a buckle, in which the weave is less close-woven than elsewhere to permit virtually continuous adjustment along its length. The weft threads are threads which are at least partially made from synthetic material and which are appreciably stiffer than the warp threads. The weft threads are joined in pairs of adjacent threads by the warp threads.
