Abstract (en)
[origin: EP0276489A1] The scaffolding platform has longitudinal spars (11) with a smooth box profile. The extensions (43) of engagement claws (12) made of sheet steel are inserted into this and are secured therein by means of rivets (46). Cross-connections (16.1, 16.2) located at a distance from the ends are welded in and provide sufficient room for suspending diagonal bars and/or for forming a climbing aperture and for suspending a ladder.
