Abstract (en)
A ski pole hand grip that is adapted to be attached to a ski pole shaft 10 of a ski pole and which is positioned horizontally or near the horizontal position so as to allow the palm of the hand to be facing downwardly. The hand grip comprises a support base 11, 12 that is adapted to be attached to the ski pole shaft 10 and a hand grip that is integrally supported from the support base and has a finger depressions 18, 19, 20, 21, 22 for receiving the digits and thumb of the skier's hand. The hand grip has an axis 11 supported substantially orthogonal to the ski pole shaft. The support base preferably comprises a first section 11 in line with a ski pole shaft and a second section 13 interconnecting the first section 11 and the hand grip and disposed at an angle to the first section so as to dispose the force center of the hand grip in line with the first section 11 of the device. There is also provided an extension 27, 28, 29 from the palm section of the ski pole grip projecting laterally over the proximal portion of the hand providing lateral support to the medial portion of the hand further providing retention of the entire grip to the hand.
