Abstract (en)

[origin: EP0276619A1] A method and a device for producing and placing a spacer sheet of the thin partition type between objects in a group of juxtaposed objects to be packaged, and a packaging method using such a spacer sheet. The device comprises means (13) for feeding sections (7) of strip; means for driving the section (7) of strip; means for transverse deformation of the section (7) of strip; means (9) for supporting a group of juxtaposed objects (4), wherein the deformation means comprise templates or the objects (3) themselves which can move between an initial position in which they are spaced from one another and a final position in which they are in the configuration of the objects (3) to be packaged. <IMAGE>
