Abstract (en)
[origin: EP0276652A2] The device consists of a housing jacket (6), in the inner space of which at least one cylindrical, metal container is arranged, which is covered on all sides by foamed heat-insulating plastic (1). In the foamed plastic (1) situated between housing jacket (6) and container (2), there is arranged at least one channel (3) which extends longitudinally in relation to the cylindrical container (2) and over its entire length and the walls (4) of which extend in a diverging manner towards the mouth (5) of the channel (3). <IMAGE>
