Abstract (en)

[origin: EP0277051A1] 1. Method for prefissuring the lower strata of roads treated with hydraulic binders wherein a discontinuity is introduced in the uppermost portion of the last layer spread (1), characterized in that furrows (2) are formed at redetermined locations in said layer prior to the final compacting hereof, a product (4) is projected into the furrows which forms a film by solidification through contact with the material forming the furrow, giving rise to said discontinuity with the surrounding material, the furrows (2) are reclosed and said layer is compacted.
