Abstract (en)
[origin: EP0277079A1] Element characterised by a general sleeve (1) shape, having, along its longitudinal lateral faces, a plurality of housings (11) and (31), each receiving, over its entire depth and over the entire thickness of the sleeve, the upper or lower end of each container with a view to holding it by fastening and mutual linking, the lower or upper face of the said sleeve (1) being stiffened by a zone (8), (28) of overlap and joining over a maximum width (9) of the two longitudinal edges of its flat blank, the sleeve (1) being placed longitudinally between two rows of containers (3), (28) for fastening and reinforcing the adjacent panel of the package. This invention is of interest to packaging manufacturers. <IMAGE>
