Abstract (en)

[origin: EP0277598A2] A masterbatch resin composition for coloring containing 30 to 95 wt. % of ethylene-ethyl acrylate copolymer resin having more than 7 wt. % of ethyl acrylate unit portion and more than 3 g/10 minutes of melt index and the remainder composed of one or more members selected from light-shielding materials, coloring pigments and dyes and additives. The masterbatch resin composition of the invention is easily kneaded and extruded by extruder, and every component of the resin composition is homogeneously mixed by the extruder. Moreover, the masterbatch is easily weighed because of not scattering, and mixed with main resin. The masterbatch is suitable for automatic machines, and automatic weighing, feeding and mixing are carried out without troubles such as clogging and uneven transportation. Particularly, one masterbatch composed of the resin composition of the invention can be blended with most of polyolefin main resins. The molded products including containers and films have uniform color, and the lamp does not remain.
