Abstract (en)
[origin: EP0277911A1] For the decorative display of matching items of clothing (11; 21-25), a clothes stand is proposed, in which column members (1, 1.1', 1.1") of a multi-column stand consist of tubular columns (1) which are connected by cross-beams (13, 14', 14") to form pairs (1.1) of columns. The top ends of the tubular columns (1) are provided with end members which reinforce their end regions mechanically in such a way that these regions and the cross-beams (13, 14', 14") form coupling zones for mounting equipment elements (9, 15-17, 19, 20) for the items of clothing to be displayed. <IMAGE>
