Abstract (en)

[origin: WO8801432A1] The device comprises a comb (14) comprised of two dismountable halves (14A, 14B) of which the successive teeth belong alternately to one half and to the other half and are separated, on the assembled comb, by a pitch (P2) equal to the pitch which separates two branches of a prehension means for taking identification elements (4) which may be threaded in the supports (5) carried by both teeth (13A, 13B) of the assembled comb so that two coded messages (TX1) are simultaneously composed and are separated by dismounting the comb, for the two ends of an electric wire.
