Abstract (en)

[origin: US4848237A] A cartridge comprises a preferably closed case, which contains a propellant charge and a priming material and which at its head end constitutes a bushinglike socket for receiving a projectile. In order to provide a reliable cartridge which can be manufactured in a simple manner and can be radially or tangentially ignited, the case comprises adjacent to its periphery at least one peripheral annular groove, which is open to the interior of the case and contains the priming material.
