Abstract (en)

[origin: US4857003A] An apparatus for effecting electrical connection of fuel injection valves for fuel injection systems of internal combustion engines connected to an electronic control unit simultaneously onto each of the individual fuel injection valves. The individual plugs of the apparatus associated with each fuel injection valve are disposed on a common connection strip which can be fastened to the engine by means of threaded bolts and can be connected to the electronic control unit by means of a cable harness.
