Abstract (en)
1. A fixing means (48, 50, 52, 54) for covering elements (36, 38, 40) which are preferably suitable for shielding bearing covers from rising vapour clouds and the precipitation of particles contained therein, have convex curves and whose lateral edges (32, 34) are held in channels fixed on mounting devices (22, 24, 26, 28, 30), characterised in that the fixing means (48, 50, 52, 54) is a tensioning element applied to the external surface (42, 44, 46) of the covering element (36, 38, 40).

Abstract (de)
Es wird eine Befestigung (48, 50, 52, 54) für Deckenelemente (36, 38, 40) vorgeschlagen, die tragende Decken abschirmt. Dabei ist die Befestigung (48, 50, 52, 54) als ein Spannelement ausgebildet, das sich an der Außenfläche (42, 44, 46) von vorzugsweise mehreren parallel zueinander verlaufenden Deckenelementen (36, 38, 40) anlegt.
