Abstract (en)

[origin: EP0278795A1] The invention relates to a percussion device making it possible to adapt to two munitions of different calibres, of which one has central percussion and the other annular percussion. According to the invention, the device comprises: - a cylindrical seat (7) mounted rotatably in the body (1) of the firearm; - a striker (11) which can slide in a stepped recess of the cylindrical seat (7) and the axis (13) of which is parallel to the axis of rotation (9) of the cylindrical seat, but offset in relation to this; - a transverse stop pin (16) which is mounted in the cylindrical seat (7) and against which the striker (11) bears by means of a spring (17); - a locking member mounted transversely in the body and capable of locking the cylindrical seat (7) in either one of the two positions of the latter. The invention is used particularly for percussion devices on revolvers and pistols with an interchangeable barrel. <IMAGE>
