Abstract (en)

[origin: WO8801660A2] Sewing machine for sewing a rubber strip to a tubular end-piece of a garment made from an elastic textile material in order to produce an endless elastic band. The sewing machine comprises a sewing foot (18) with an insertion opening (22) for the elastic band (24), a braking device (48) to resist the insertion movement of the elastic band and provided with two clamping elements (50, 52) which grip the band, and a cutting system (26) which can be motor-driven, in order to cut the rubber band. In order to prevent, after said cutting, the reintroduction of band (24) into the insertion opening (22) of the sewing foot (18), the cutting system (26) is arranged behind the insertion aperture (22) of the sewing foot (18) on the latter, and a drive system (56) is associated with the braking device (48) in order to increase the gap between the two clamping elements (50, 52) immediately before actuation of the cutting system (26).
