Abstract (en)

[origin: EP0279179A1] A sheet-like label support portion (1) serves to receive a display label. From one side of the label support portion (1), in the plane thereof and adjacent thereto, there projects a suspension hook (4) which is open at one side, for suspending the suspension device from a supporting rail (7). An arrester slot (11), open at the edge, is formed on each of the opposite sides of the label support portion (1). One end of a loop of cord (10) can be arrested in each of these arrester slots (11), and a hand of bananas can be suspended from this loop, before it is attached to the label support portion (1). In order to prevent the loop of cord (10) from slipping axially out of the arrester slot, the ends of the loop of cord are provided with a thickened portion. <IMAGE>
