Abstract (en)
[origin: EP0280081A2] A weather protection strip (11) for windows or doors, which is located on a frame (1) and has a contact surface (20) for a seal (4) arranged on the associated leaf (2), is made up of two profiled parts (12, 13) which are locked to one another in the region of the support (5) on the frame (1). The profiled part (12) arranged on the outside is made from a metal material, the profiled part (13) arranged on the inside from an insulating material. By this design, satisfactory insulation is achieved in the rebate region of a window or of a door. Moreover, the formation of condensation water on the weather protection strip (11) is avoided and good thermal separation is ensured in its region. <IMAGE>
