Abstract (en)  
[origin: EP0281046A2] The mould for pouring, having two mould walls limited at the pouring edge and comprising a plurality of adjoining moulding boards and also supporting profiles which support these on the mould outer surface, is to be constructed such that as wide a variety of applications as possible is permitted and the handling is simple, particularly with regard to the adaptability of the mould. For this purpose, the mould (10) is constructed to be longitudinally adjustable both in its vertical extent and also in at least one horizontal direction, in each case two supporting profiles (14), vertical in the installed position, being connected, close to their upper and lower ends, by telescopically extendable ridge or transverse profiles (22, 30) to form a frame which is adjustable in height in a modular dimension (i4) and is stiffened by diagonal tensioning elements (34). <IMAGE>
