Abstract (en)

"The present invention relates to an abrasive grinding wheel for working stone materials such as marble, granite and the like comprising a supporting body (2) associable with a rotating operating assembly. The peculiarity of the invention resides in the fact that it comprises an elastically resilient mass (10) peripherally defining a region with a shape substantially complementary to the shape of the part (12) being machined. Portions (13,20) in abrasive material, constituted by a mixture of rubber and carborundum or possibly of sections (20) of emery cloths, are provided on said region.
