Abstract (en)

Coupling element of the type by which a first element (2-19) which is equipped with such a coupling element (2) can work in concert with an opening (11) in a thin-walled second element (3). The coupling element (1) mainly consists of a flat lip (4) showing at least one U-shaped part (28) which near the extremity of at least one of its legs (7-8) is in connection with the above mentioned first element (2) whereby opposite of each other on both outer sides (5-6) of the respective legs (7-8) of the U-shaped part (28) a recess (9-10) is provided for fixing and positioning the thin-walled second element (3) and where the bulge of the U-shaped part (28) fits through the above mentioned opening (11) of the second element (3).
