Abstract (en)

A control system for an automatic transmission having a first gear hold range, and a second gear hold range. A detector (1) is provided for detecting a selected gear hold range and for producing a gear hold signal, and a sensing device (2) is provided for producing an engine speed signal dependent on engine speed. When the engine speed signal exceeds a predetermined speed under the selection of one of gear hold ranges, the gear hold range is released and transmission is upshifted.
