Abstract (en)

1. A distributor block for multi-way valves (17), having a plurality of connecting elements (2), which have passages (10) for distributing a fluid and a first surface (A) on which a multi-way valve (17) is flanged and a second surface (B) on which a carrier (1) is flanged, wherein the two surfaces (A, B) are disposed opposite one another and the passages (10) of the connecting elements (2) are accessible from both surfaces (A, B) and the carrier (1) has collecting passages (3) leading to the connecting elements (2), characterised in that the carrier (1) is in one piece and is of cuboid form and the connecting elements (2) are individually flanged on to it side by side, the collecting passages (3) are longitudinally directed bores and the connecting elements (2) are angled and, together with the angled part (23), embrace the carrier (1), and the angled part (23) has connecting bores (9, 20) which lead to the passages (10) of the connecting elements (2) and on which screw-in or plug-in connecting elements (6), which form the working connections, are mounted, either directly or by way or alteral connecting plates (4).

Abstract (de)

Auf einem Träger (1) mit Sammelkanälen (3) sind mehrere abgewinkelte Verbindungselemente (2) mit aufgeflasschten Mehrwegeventilen (17) nebeneinander in einer Reihe angeordnet. Jedes Verbindungselement (2) ist einzeln auf dem Träger (1) aufgeflasscht und weist Kanäle (10) zur Verteilung eines Mediums auf. Die Kanäle (10) sind einfach ausgebildet und von zwei gegenüberliegenden Flanschflächen (A, B) zugänglich und erlauben eine kostengünstige Herstellung beispielsweise in Aluminium-druckguss. Am abgewinkelten Teil (23) ist eine Anschlussplatte (4) mittels einer Clipvorrichtung (7) abnehmbar angebracht. Die Arbeitsanschlüsse (6) können auch unten am abgewinkelten Teil (23) angebracht sein.
