Abstract (en)

[origin: WO8801575A1] A process for producing a decorative laminated sheet, used preferably for producing a furniture or wall lining. A disadvantage of such decorative laminated sheets is that they are not suitable for open-air applications because their surfaces lack resistance to weather conditions. The purpose of the invention is to provide a weather-resistant decorative laminated sheet. A fluid weather-resistant protective layer (4) of resin is applied to the surface of the decorative paper web (3) forming the decorative surface of the sheet. The resin chosen can be cross-linked by adding an additive or under the influence of air and light, thus forming a durable and cohesive protective layer (4).
