Abstract (en)

[origin: WO8706682A1] The installation comprises a casing (1) provided with a pan (2) and containing, inside it, heat exchanging surfaces shaped as longitudinal plates (3) and forming channels. The channels consist of a dry and a wet section. Each dry (4) and wet (5) section of neighbouring channels at one of the butt-ends of the casing (1) is interconnected by means of an opening (12) made in the longitudinal plate (3) and located closer to the end of the dry section (4), whereas each neighbouring wet section (5) is provided with a plug (13) at the point of its conjugation with the corresponding dry section (4a), an inlet socket (7) at the dry sections (4a) of the opposite butt-end of the casing (1) being connected to the object.
