Abstract (en)

[origin: EP0281913A2] In a device for the supply of portions and the gradual dispensing of liquid product, especially liquid washing agent, into the washing water of a machine, the solution provided will allow a supply of portions of liquid product, especially liquid washing agent, in the water feed of washing machines and its gradual and uniform dispensing into the water flowing into a washing machine. This is achieved by means of a porous, especially trough-shaped or crucible-shaped insert (1,7) for introduction into the feed of washing machines. <IMAGE>
