Abstract (en)
[origin: EP0281932A2] Distributing machine with a frame and a storage container which is assigned driven metering members which are driven by a variable drive. To ensure in a simple way that, when the discharging operation is interrupted, for example during turning at the end of the field, the drive motor for the metering members is automatically switched off, a variable drive motor (14) is arranged on the drive shaft (13) of the metering members, and, located on the drive motor (14), is a switch- off device (16) which automatically switches off the drive motor (14) when there is an interruption in the discharging operation. <IMAGE>
