Abstract (en)

[origin: EP0281969A2] 1. Socket with an additional module. 2.1 Standardised installation sockets are not designed to hold sockets with an additional module. It is intended to produce a socket which allows an easily fitted additional module to be installed without modifying the normally used socket base, it being intended to maintain the standardised minimum spacing between the socket base of the installation socket. 2.2 The socket base (1) is raised by means of shortened spacer webs (21) and the additional module, whose upper side is matched to the lower side of the socket base (1), is directly anchored onto projections (11) of the socket base (1), by means of first latching hooks (61), designed in the form of brackets. <IMAGE>
