Abstract (en)

[origin: EP0282457A2] An upwardly preloaded supporting table (15) for receiving a stacked stock of newspapers is vertically displaceable in a housing. A slide (32) can be pulled forwards by means of an operating handle (35). The slide (32) carries a pivotable arm (37) for displacing the uppermost newspaper of the stack into an extraction slot via a guide plate (53). For this, a roller (39) in the form of a 3/4 segment of a circular cylinder is mounted rotatably on the front end of the arm. Spikes (41) project from the circumference of the roller. In the rear basic position, the front end of the arm is lifted off from the stack by a pusher (45) striking it from the rear. <IMAGE>
