Abstract (en)
[origin: EP0282754A2] An inking and damping device for offset printing machines having an inking roller with an elastic surface, the diameter of which corresponds approximately to that of the plate cylinder, where an inking mechanism with riding rollers and a damping mechanism are associated with the inking roller, where the drive of the inking roller is improved by two opposed ink spreader rollers and where the damping mechanism is associated with a subsequent spreader roll, which incorporates the damping solution into the underlying ink film. <IMAGE>
