Abstract (en)
[origin: EP0282808A2] For the cylinder heads (13) of a liquid-cooled internal combustion engine (10) with rows of offset cylinders in opposing cylinder housings (11), in particular V-engines, a combined cylinder head (13) is proposed which has a coolant flow system with an outlet line (33) adjacent to the outlet ducts (17) as a connection between a coolant chamber (18) and a transverse duct (30), to which a longitudinal duct (19) adjacent to the inlet ducts (15) can be connected, the said longitudinal duct having one connection (20) for a manifold (21) of a heat exchanger (22) and in addition a further pipe connection (24) at the end of the cylinder head (13) remote from the transverse duct. <IMAGE>
