Abstract (en)

[origin: EP0282859A2] Several objects (10) to be decorated are placed on a table (12), on the surface (14) of which channels (16) open out, which can be connected to a source of negative pressure. Placed on the objects (10) is a bearing film (20) which is printed with a structure (22) on its underside. Placed on top of the latter is a covering film (24) which is sealed off against the edge (18) of the table (12). Then the space (28) which is bounded by the table (12) and the covering film (24) and contains the objects (10) and the bearing film (20) is evacuated. By this means, the covering film (24) is pressed against the bearing film (20) and the latter is pressed onto the objects (10) and heated until the structure (22) has passed onto the objects (10). <IMAGE>
