Abstract (en)  
[origin: EP0283288A2] Apparatus for suspending a foliate article is described, which apparatus comprising a rail (1) having a substantially planar first surface (5) and a projection (6) adjacent to said surface (5), the rail (1) being adapted (7) to be supported with the first surface (5) in a substantially upright position, releaseable gripping means (10) having a gripping surface (11) for exerting resilient pressure upon the first surface (5) adjacent to the projection (6), resilient spring means (11, 12, 13) for providing said pressure and, rail engaging means (12) for holding the gripping surface (11) to the rail (1) in a gripping position, in which position the spring means (11, 12, 13) cause the gripping surface (11) to exert pressure upon the first surface (5) adjacent to the projection (6).
