Abstract (en)

A broadband host is defined by a main processor (10) communicating via a channel (DMA 15) with a hard disk (16), on the one hand, and output boards (2-1 to 2-16) on the other hand. Each board comprises its own processor which manages, in double-access and toggle mode, two buffer memories A and B. Whilst one delivers musical information to the user, the other is filled, and vice versa. <IMAGE>

Abstract (fr)

Un serveur à large bande est défini par un processeur principal (10) communiquant par un canal (DMA 15) avec un disque dur (16) d'une part et des cartes de sortie (2-1 à 2-16) d'autre part. Chaque carte comporte un processeur propre qui gère en double accès, en mode à bascule, deux mémoires tampon A et B. Tandis que l'une délivre des informations musicales à l'utilisateur, l'autre est remplie et inversement.
