Abstract (en)
[origin: EP0283350A1] A broadband host is defined by a main processor (10) communicating via a channel (DMA 15) with a hard disk (16), on the one hand, and output boards (2-1 to 2-16) on the other hand. Each board comprises its own processor which manages, in double-access and toggle mode, two buffer memories A and B. Whilst one delivers musical information to the user, the other is filled, and vice versa. <IMAGE>
