Abstract (en)
[origin: EP0283395A1] 1. Device for dressing a grinding wheel (1) having its shaft (2) mounted for rotation in a frame (3), which comprises at least two diamond charged dressing rolls (7a and 7b) whose axes are parallel to each other and perpendicular to the shaft (2) of the grinding wheel and are mounted for rotation in a mobile support (4) and means for dressing the periphery of the grinding wheel, characterized in that the support (4) for the diamond charged dressing rolls is movable in a direction perpendicular to the axis of the dressing rolls so parallel to the shaft of the grinding wheel, and in that the means for dressing the periphery of the grinding wheel are formed by an abraide (12) carried by the support (4).
