Abstract (en)
[origin: EP0283433A1] The individual lying surfaces (2) are provided at their corners with catch devices (3) which can be engaged in the support posts (1). The catch devices are constructed in such a way that the lying surfaces (2) can be engaged in the support posts both in a horizontal and in a vertical position. By this means, the lying surfaces in the vertical position can also be used as partitions for room division. To set up the emergency bed system, only few manipulations and virtually no tools are required. <IMAGE>
