Abstract (en)

[origin: WO8604860A1] It is difficult to standardize the patent procedures in which the up-to-date techniques are handled, and the patent procedures demand a special skill, and are difficult for technicians to understand. This adversely affects the quality and efficiency of the patent procedures in each stage thereof, and the protection of newly-developed techniques. This also seriously affects the efficiency of the examination of applications, the prevention of a delay in the granting of a patent right to an invention and the functions of the system of patent, and this unfavorable influence is further increased by the advancement and complication of techniques, an increase in the number of patent applications and the application filing system. It has been said that it is difficult to radically solve these problems. The patent procedural form according to the present invention consists of an input note for the discussion of the basic items of a procedure and an input note represented by codes, a code note (program) containing typical statements constructed by codes and general words, and an output note showing the outlines of the statements, so as to enable the form to be filled by an electronic computer. It is made by a man and a machine jointly, and comparatively and typically in conformity with the substance of the human engineering and patents for the visual recognition of the content of the form. This form functions as a connection between a procedure standardization metal mold and a plurality of intellectually-fused materials, and is systematically composed. This patent procedural form can be used for substantially all kinds of patent procedures in and by many companies, government offices and specialists and the general public, which and who deal with patents. Since this patent procedural form enables Japan to be connected to various foreign countries with respect to the patent affairs, the techniques coping with the international problems including the internationalization, unification and mechanization of patent system can be provided.
