Abstract (en)

[origin: EP0284500A2] Waterproofing asphalt sheet useable as under-layer for constituting an upper layer waterproof cladding and which can be poured hot (asphalt or another analogous material). This sheet comprises a screen (2) incorporated into its inner face. A narrow longitudinal zone (3) stripped of the screen extends along one edge of the sheet and a longitudinal zone extending along the opposite edge comprises perforations (4). In the waterproof cladding, the zone stripped of the screen of a sheet covers the zone comprising perforations of the adjacent sheet and the asphalt is poured over the whole assembly, air included in the location of the overlap zones escaping via the perforations (16). Application: waterproofing claddings for works of art and buildings. <IMAGE>
