Abstract (en)

[origin: EP0284782A2] The knot controller comprises a yarn or thread through-hole (16) which is formed between two rotary bodies (17, 18), of which at least one (18) is rotatably mounted and mounted displaceably with respect to the other rotary body (17) for the purpose of changing the size of the through-hole (16) or for inserting the thread (15). The rotary bodies (17, 18) prevent thread abrasion and the accumulation of abraded thread in the region of the through-hole. <IMAGE>
