Abstract (en)

[origin: EP0284812A1] For transporting sheets, e.g. paper sheets, preferably by removing the topmost sheet (4) from a sheet stack (2), a transport head (8) is provided, which employs a partial vacuum to suck up the topmost sheet. This transport head is provided with roller elements (20), against which the sheet to be transported is applied by means of a partial vacuum. The sheet sucked up in this way can be conveyed in any transport direction. In this case, the transport direction is selectable or adjustable. The transport head (8) according to the invention thus allows exact alignment of the sheet during conveyance. <IMAGE>
