Abstract (en)  
[origin: EP0284945A2] In an air jet texturing apparatus for a plurality of synthetic filaments, each processing station consists of two drawing zones for drawing, in each case, a core thread and an effect thread, comprising intake godets (1) and (3) and exit godets (4) and (5), and also a texturing zone containing a texturing nozzle (20). To ensure a manageable arrangement and to simplify the drive for a multiplicity of processing stations, the drawing zones and also the texturing zone are arranged parallel to one another at essentially the same level. Even a further drawing zone for mechanically stabilising the total yarn can also be arranged at the same level. All the godets of one processing station are arranged on the legs of a horizontal V. <IMAGE>
