Abstract (en)

[origin: US4858657A] A yarn cutting device for weaving looms having fixed reserves of weft and which operate with a gripper type weft-carrying shuttle wherein the shuttle supports a guiding member which carries the yarn towards the shed on the side of the loom. The guiding member includes two metal plates mounted between two resilient shims which allow the plates to be forced apart to receive a blade moved vertically into the path of the guiding member as the shuttle enters the shed to thereby sever the yarn. In an alternate embodiment, the guiding member is fixed adjacent the shed and the blade is carried by the shuttle.

Abstract (fr)

La fausse-navette (1) supporte sur le côté un organe de guidage (9) comprenant deux plaquettes métalliques (12) associées à des cales élastiquement déformables (13) qui permettent l'engagement, entre lesdites plaquettes, d'une lame (14) animée d'un mouvement vertical alternatif pour autoriser la sortie de la fausse-navette hors de la foule et coopérer au contraire avec l'organe (9) lors de son entrée dans celle-ci, le fil (7) étant ainsi sectionné quels que soient son diamètre et sa résistance.
