Abstract (en)

[origin: WO8802844A1] A device for measuring the position and orientation of receiving antennae (3) with respect to transmitting antennae (2) utilizing electromagnetic signals. The transmitting and receiving components of the instant device consist of two or more separate transmitting antennae of known position and orientation with respect to each other. Each transmitting antenna (2) is driven one at a time by a pulsed, direct current signal. The receiving antennae (3) measure the transmitted direct current magnetic field and the Earth's magnetic field as well. A computer device (5) is used to control the transmitting and receiving elements and to convert the receiving signals into position and orientation outputs.
