Abstract (en)
[origin: EP0285914A2] The shower partition contains a wall element (80) which consists, in particular, of an at least partially transparent material and is arranged on the wall (10) of a room. The intention is to provide a sturdy attachment of the wall element (80) to the wall (10) of the room with little constructional expenditure, and to be able to align the wall element (10) in a simple manner. It is proposed that the wall element (80) is attached to the fixed wall (10) by means of a cross-beam (21). The latter contains a baseplate (27) and an edge (29), a first contact surface (31) for the wall element (80), and a second contact surface (33) for the wall (10), said contact surfaces (31, 33) preferably being arranged at right angles to each other. <IMAGE>
