Abstract (en)
[origin: EP0285922A2] The invention concerns a case for video cameras which is characterized in that it presents a rail (11, 36) receiving a slide (12, 34) connected with the terminal part of the fixed supporting stand (14, 33) of the video camera. The slide is connected with the video-camera supporting stand by means of an angular junction and it slides on the grooved rail, so that the case can be pulled out, but remains hooked to the supporting stand thanks to the presence of a catch arranged on the bottom of the rail.
