Abstract (en)

A method for producing a double sealed insulating glass unit which comprises moving a spacer frame member longitudinally through first and second sealant application stations, applying a first sealant (26) continuously to at least opposite facing spacer frame member sides, applying a second sealant (28) continuously to a third side of the spacer frame member, placing the resulting spacer frame member between peripheral regions of panes of glass (12, 14) with the first sealant (26) between the glass and spacer frame member and the second sealant (28) between the glass along the third side of the spacer frame member, and pressing the panes of glass (12, 14) toward each other to sealingly engage the glass with the first and second sealant.
