Abstract (en)

A silver halide photographic light-sensitive element and a processing method therefor are disclosed. The photographic element comprises a support having thereon photographic component layers including at least one silver halide emulsion layer which contains silver halide grains comprising not less than 90 mol% of silver chloride, and at least one layer among said photographic component layers contains a compound presented by the followinf formula [I] and a capturing agent for fluorescent whitening agent: <CHEM> The photographic element is preferably developed with a developer containing a primary aromatic amine color developing agent and not containing benzyl alcohol for 20 to 60 seconds. The photographic element is improved in sharpness of the dye images formed on it.
