Abstract (en)

A device for positioning the weft on weaving machines which utilise tucking-in selvedges, includes means for holding the thread of the weft (5) and means for the suction of the cut thread. In a preferred arrangement, a suction tube (1) connected to a vacuum pump is installed perpendicularly to the direction of the weft thread (5) and provided with a V-shaped slot (4), the apex of the slot (4) being in line with the trajectory of the weft thread. The means which holds the weft thread is preferably a nipper (9).
