Abstract (en)

[origin: EP0286547A1] Installation intended for engaging laundry articles into a laundry machine, for example a blanket press. In addition to the conventional loading stations carried by a stationary beam arranged vertically in line with the entrance of the axial conveyor, there is an axially displaceable movable beam (33) which can alternately take up two other stations (18,19) which are normally stored on parking tracks (16,17) placed in front of the machine and largely upstream of the conveyor. In an intermediate position (330), the blanket is set aside, waiting for the entrance of the conveyor to be free. <IMAGE>
